

# DISC Surgery Center at Palm Beach

## Clinical Scope Overview

### Spine Surgery

At DISC Surgery Center at Palm Beach, physicians provide the full spectrum of advanced spine surgery, including:

- Artificial disc replacement (ADR)
- Minimally invasive decompression
- Fusion-sparing and fusion-alternative procedures
- Motion-preserving reconstruction
- Complex outpatient spine surgery

Every surgical plan is developed with precision and focused on preserving spinal function, minimizing tissue disruption, and restoring long-term mobility. This level of expertise is delivered in an outpatient setting designed for safer procedures, faster recovery, and a confident return to daily life.

### Orthopedic Surgery

Our surgeons perform a comprehensive range of orthopedic procedures, including:

- Advanced arthroscopy
- Ligament and tendon repair
- Joint preservation procedures
- Total and partial joint reconstruction
- Trauma and fracture care

Each surgical plan is designed to reduce pain, restore strength, protect long-term joint health, and support a return to active living. Supported by DISC's refined outpatient model, patients experience exceptional outcomes and a more efficient recovery than traditional hospital-based care.

## Interventional Pain Management

DISC Surgery Center at Palm Beach also supports interventional pain management procedures, including:

- Epidural steroid injections
- Facet joint injections
- Radiofrequency ablation
- Spinal cord stimulator trials and related procedures
- Other image-guided interventional treatments as determined by the treating physician

These procedures are performed in an outpatient setting when clinically appropriate and based on physician evaluation.
